PROJECT TITLE: PASSWORD BASED ON/OFF CIRCUIT BREAKER

DESCRIPTION: The main aim of the project is to assure the lineman safety. When a line man switch on or switch off the line by manual operation there is a high chance of electrical accidents so to avoid the electrical accidents we use a password based circuit breaker.

The main purpose of password-based circuit breaker is, when a line man wants to turn on /off a circuit or loop he asked to enter a password, if the entered password matched with the pre-defined or pre-loaded password in microcontroller then the circuit will get turned on or turned off based on our need. So, using this we can avoid Manual operation so electrical accidents will be reduced. So, my project intension is to reduce the electrical accidents which are caused by manual operation of switches.
