INTERSHIPS AND PROJECTS

Internships	Thaniya Technology (Duration September 2021 - October 2021) This Website Project contains an admin and user side. The admin side manages all the management like adding and managing categories, authors, books, issued books, and so on. The admin has an important role in the management of this online library system. A library management system makes a convenient way for students and the library to keep the records of books, borrowing and returning of books. Skills used - HTML, CSS, Javascript, PHP, MySQL, Github, GIT, React.js, Node.js
Projects	Gym management system (Duration August 2020 - October 2020) Gym Management System developed using PHP is an excellent solution for gyms with large growing number of members or ones serving elite clientele. This solution helps to identify the user and manage their timely memberships. In its working, each member is issued a membership card which is valid for a fixed number of gym sessions or for a particular period of time or a combination of the two totally based on the payment policy. Once the time frame or number of sessions expire, the machine notifies the member about the payment of renewal. Hence, the system reduces hassle and any chances of quarrels between the members and the gym management. It can also generate multiple reports like monthly, weekly, daily session wise. Skills used - HTML, CSS, Javascript, PHP, MySQL Student Record Management System (Duration April 2021 - July 2021) Computer is fast emerging as a daily need in walks of life. The knowledge of computers and programming language has become basic skill need to service in today's information-based society. Every business institution and the corporate section make use of computer for making their operation efficient and effective. Student record management system is basically for management of storing phone numbers and other related informations of person. It will reduce paper work and work load of user. To reduce the paper work and provide fast service to customers, it can be used in any fields for maintaining database details and their quantities. Student record management system as the name indicates will be used for managing students records. It will be used for various purposes. Accepting correct data will result in generating the desired output in correct format without any delay. So this system has been enabled with validation data checkup while entering the data and before saving it to the particular. Skills used - C++
