## PROJECT DONE

- **Final year project : "Intelligent Vehical With Road Side Unit"**

This system will provide the ease and comfort to the driver and it provides the safety to the passengers in the intelligent car. Government can control the road accidents and the road traffic by using this system. The private manufacturers can also get the benefits from this system.

We are using 8051 Microcontroller Kit as a Decision making device. For the transmission and reception of the signals we can use the RF Transmitter and RF Receiver.

- **Third year project : " Arduino Based Biometric Attendance"**

During entering in the class or any company have to take an attendance of student or employ. When student or employ they have to pass the biometric test .Then the attendance is consider. I am handling the programming and Hardware Interfacing part.

This Wireless fingerprint attendance system is elegant and efficient way to track the presence of students in the class over an entire semester for various courses. It also gives easy interface to get detailed information of relevant queries. Using this attendance system, Professor can get the attendance of a particular student throughout whole semester, attendance of whole class for a particular day and attendance of whole class throughout the semester in a tabular form within few seconds .

- **Mini Projects -:**

1. Automatic street light controller
2. Darkness detector.
